MACHINE OPERATED BY MOUTH

Conversion can be made to existing machines

- Blow in the pipe and the machine will start sewing
- Cover the end of the pipe with the tongue to create a vacuum and the machine will sew continuously at a constant speed.
- Machine speed can be controlled by the pressure amount that is blowed.
- Stop blowing in the pipe and the machine will stop sewing
- Suck on the pipe a little and the presser foot will lift.
- Suck on the pipe a little more and the machine will back tack (if lockstitch), trim the thread, activate the tension release, activate the thread wiper and raise the presser foot.
- All of the machines standard features are retained.
- Both hands can still be used for sewing
- Conversion can be retro fitted by us to existing machines
- Can be fitted to lockstitch or chainstitch machines
- Can be used in combination with EFKA, HO HSING, SUNSTAR FORTUNA motors and controllers.

Many governments around the world offer incentives to companies who employ physically handicapped workers. With this in mind, we have developed a Kansai Special WX-8803D/UTC-E machine to be completely operated by mouth. All of the machine's standard features are still available. The material can be controlled by both hands as normal.

Regierung vieler Länder bieten staatliche Förderung für Firmen, die Körperbehinderte einstellen. Wir haben daher für den Textilfertigungsbereich diese Kansai Special WX-8803D/UTC-E entwickelt, die von der Näherin gänzlich mit Hilfe des Mundes bedient werden kann. Alle zusätzlichen Standardfunktionen der Maschine sind auch hier bedienbar. Der Materialtransport kann mit beiden Händen gehandhabt werden.

Beaucoup de gouvernements dans le monde offrent des aides d'Etat pour les entreprises qui employent des handicapés physiques. C'est pour ça nous avons développé cette machine Kansai Special WX-8803D/UTC-E qui peut être opérée complètement par la bouche de l'ouvrière. Toutes les fonctions standards sont quand-même disponibles. Le tissu peut être contrôlé par les mains comme d'habitude.

Molti governi del mondo sopportano le ditte che assumono handicappati. Per questo motivo abbiamo sviluppato questa macchina Kansai Special WX-8803D-UTC-E chi puo' essere comandata completamente tramite la bocca dell'operaia. Tutte le caratteristiche standard della macchina sono ancora disponibili. Il materiale puo' essere controllato da entrambe le mani come sempre.
